

Rethinking Romance Microvariation through SI

Sam Wolfe, University of Oxford

Microvariation and SI
General Romance Background

- General acknowledgement that contemporary Romance varieties show extensive morphosyntactic microvariation (Kayne 2000, 2005; Poletto 2000, 2002; Manzini & Savoia 2005; D'Alessandro, Ledgeway & Roberts 2010; Benincà & Munaro 2010; Dindelegan 2013; Ledgeway 2015; Jiménez-Fernández 2015; Schifano 2018)
- Much of this variation can be attributed to variation within the left periphery of standard and non-standard Romance varieties (cf. Manzini & Savoia 2003, 2010; Damonte 2005; Ledgeway 2010; Benincà & Munaro 2010; Haegeman 2012; Cruschina 2012; Corr 2016; Cruschina & Ledgeway 2016;§31.3).

Microvariation and SI
General Romance Background

How does this synchronic claim relate to both historical and diachronic studies of **Romance morphosyntax**? There are broadly three schools of thought at present.

(Semi)-Homogenous V2 Accounts

Emphasis on homogeneity of the early textual records which are characterised by a V2 syntax (cf. Salvi 2000, 2004, 2011, 2012; Benincà 2004, 2006, 2013; Benincà & Poletto 2004).

But see Vanelli et al. (1986)

How does this synchronic claim relate to both historical and diachronic studies of Romance morphosyntax? There are broadly three schools of thought at present.

(Semi)-Homogenous V2 Accounts

Emphasis on homogeneity of the early textual records which are characterised by a V2 syntax (cf. Salvi 2000, 2004, 2011, 2012; Benincà 2004, 2006, 2013; Benincà & Poletto 2004).

But see Vanelli et al. (1986)

(Semi)-Homogenous SVO Accounts

Emphasise *both* homogeneity of SVO syntax and overall continuity in core clausal syntax from early Romance to the present day (Lemieux & Dupuis 1995; Kaiser 2002; Rinke 2007; Sitaridou 2011, 2012)

How does this synchronic claim relate to both historical and diachronic studies of Romance morphosyntax? There are broadly three schools of thought at present.

(Semi)-Homogenous V2 Accounts

Emphasis on homogeneity of the early textual records which are characterised by a V2 syntax (cf. Salvi 2000, 2004, 2011, 2012; Benincà 2004, 2006, 2013; Benincà & Poletto 2004).

But see Vanelli et al. (1986)

A Different Approach

Homogeneity in V2 syntax but rich variation in other domains (Poletto 2013; Wolfe 2015, 2016, 2017, 2018)

(Semi)-Homogenous SVO Accounts

Emphasise *both* homogeneity of SVO syntax and overall continuity in core clausal syntax from early Romance to the present day (Lemieux & Dupuis 1995; Kaiser 2002; Rinke 2007; Sitaridou 2011, 2012)

How does this synchronic claim relate to both historical and diachronic studies of Romance morphosyntax? There are broadly three schools of thought at present.

(Semi)-Homogenous V2 Accounts

Emphasis on homogeneity of the early textual records which are characterised by a V2 syntax (cf. Salvi 2000, 2004, 2011, 2012; Benincà 2004, 2006, 2013; Benincà & Poletto 2004).

But see Vanelli et al. (1986)

A Different Approach

Homogeneity in V2 syntax but rich variation in other domains (Poletto 2013; Wolfe 2015, 2016, 2017, 2018)

(Semi)-Homogenous SVO Accounts

Emphasise *both* homogeneity of SVO syntax and overall continuity in core clausal syntax from early Romance to the present day (Lemieux & Dupuis 1995; Kaiser 2002; Rinke 2007; Sitaridou 2011, 2012)

(Semi)-Homogenous V2 Accounts

Emphasis on homogeneity of the early textual records which are characterised by a V2 syntax (cf. Salvi 2000, 2004, 2011, 2012; Benincà 2004, 2006, 2013; Benincà & Poletto 2004).

But see Vanelli et al. (1986)

Homogeneity in V2 syntax but rich variation in other domains (Poletto 2013; Wolfe 2015, 2016, 2017, 2018)

(Semi)-Homogenous SVO Accounts

Emphasise *both* homogeneity of SVO syntax and overall continuity in core clausal syntax from early Romance to the present day (Lemieux & Dupuis 1995; Kaiser 2002; Rinke 2007; Sitaridou 2011, 2012)

The microvariation found in the medieval period may correlate with a purported **North/South split** (Zamboni 1998, 2000) in Romance syntactic typology (Ledgeway 2012:312-319; Wolfe 2018, in press)

Microvariation and SI

If *si* is indeed a marker of Topic continuity it is not clear why it should co-occur with readily accessible DPs

Microvariation and SI Previous Research on SI

The Topic Continuity Account

SI does not occur at the beginning of a portion of text in either French or Sicilian (in line with Marchello-Nizia 1985:25; Ménard 1988:328; Lemieux & Dupuis 1995:96; Vance 1997:54; Van Reenen & Schøsler 2000:86; Buridant 2000:508; Bonnard & Régnier 2008:209)

SI often occurs with pre- or post-verbal discourse ACTIVE subjects (Foulet 1928:301; Marchello-Nizia 1985:7; Fleischman 1991:265-266,271; Ferraresi & Goldbach 2002:12; Salvesen 2013:156; Buridant 2000:509)

Even more problematically SI also occurs with brand NEW information subjects (This has generally gone undiscussed)

E si i furent e Gerin e Gerers
 and si LOC.CL=be.3PL.PST and Gerin and Gerers
 ‘And Gerin and Gerer were there’
 (Old French *Roland* 107)

in chilla vallij sì era unu homu de amirabilj virtuti
 in that valley si be.3SG.PST a man of admirable virtues
 (Old Sicilian *Gregoru*, 34, 18)

The Head Account

SI occurs with both G- and R-Inversion in Old French and R-Inversion in Old Sicilian. This is the exact effect fronted XPs have but unexpected if SI is a Head (pace Ledgeway 2008:444-445)

Quant eles furent faites, si fu la chose teüe que ...
 when they be.3PL.PST do.PTCP si be.3SG.PST the thing keep-quiet.PTCP that

‘When they [the covenants] were completed, it was kept secret that we would go to Babylon’ (Old French, Villehardouin1, 30, 3)

et in là ... sì nchi fiche sanctu Benedictu unu oratoriu
 and in there si CL make.3SG.PST Saint Benedict an oration

‘And there (where the altar of Apollo was), Saint Benedict gave an oration (Old Sicilian, Gregoriu 51, 1)

The Head Account

SI occurs with both G- and R-Inversion in Old French and R-Inversion in Old Sicilian. This is the exact effect fronted XPs have but unexpected if SI is a Head (pace Ledgeway 2008:444-445)

The Head Account

SI occurs with both G- and R-Inversion in Old French and R-Inversion in Old Sicilian. This is the exact effect fronted XPs have but unexpected if SI is a Head (pace Ledgeway 2008:444-445)

If Head SI co-occurs with verb movement through Head adjunction the **wrong order of V + SI is predicted** (Ledgeway 2008:439, n.3)

The Head Account

SI occurs with both G- and R-Inversion in Old French and R-Inversion in Old Sicilian. This is the exact effect fronted XPs have but unexpected if SI is a Head (pace Ledgeway 2008:444-445)

If Head SI co-occurs with verb movement through Head adjunction the **wrong order of V + SI is predicted** (Ledgeway 2008:439, n.3)

We are also left with a conceptual problem of formulating a potentially ad-hoc account of why in a **V2 language V-to-C movement obtains in *all* contexts except where SI is present**

The Phrasal Expletive Account

Fits with the observation that SI is difficult to define in semantic terms. Foulet 1928:§300; Skårup 1975:238-239; Jensen 1990:472-473; Roberts 1993:330; Vance 1995:185; 1997:53; Benincà 2006; Poletto 2005)

The Phrasal Expletive Account

Fits with the observation that SI is difficult to define in semantic terms. Foulet

1928:§300; Skårup
1975:238-239; Jensen
1990:472-473; Roberts
1993:330; Vance
1995:185; 1997:53;
Benincà 2006; Poletto
2005)

Declines at exactly the same time as the V2 constraint (Likely 15th century for both French Marchello-Nizia 1985:200 and Fleischman 1991:278 and Sicilian)

The Phrasal Expletive Account

Fits with the observation that SI is difficult to define in semantic terms. Foulet
