

**Table S2:** Trial-by-trial description of Experiment 2 (see full legend in ‘Legends for Supplementary Materials’)

<b>Trial</b>	<b>Success?</b>	<b>Trial duration</b>	<b>Tool dimensions</b>	<b>Description</b>
1	y	00:22	90 × 5.0	Pecked hard at the opening to the apparatus, causing the bucket to jump out of the vertical arm.
2	y	00:32	90 × 5.0	Had difficulty picking up the tool, dropping it several times. After 14s, squeezed together one of the hooked ends with her beak and picked up the tool. After 18s, probed (for 14s) into the vertical arm of the apparatus with the unmodified (hooked) end of the tool, and successfully retrieved the food.
3	y	00:35	90 × 5.0	Again had difficulty picking up the tool, dropping it several times. After 14s, squeezed together one of the hooked ends with her beak and picked up the tool. After 18s, probed (for 4s) into the horizontal arm of the apparatus with the unmodified (hooked) end. After 29s, turned the tool around (squeezed together the other hooked end before picking it up) and poked it through the hole in the horizontal arm, successfully retrieving the bucket.
