

# From logical to conceptual grounding: intelligibility and asymmetry of the notion

Francesca Poggiolesi

Paris

Philosophy of Mathematics Seminar

6 July 2018

2pm

The aim of this talk is twofold. On the one hand, we will try to partially address the criticism that grounding is an unintelligible notion by proposing an account of conceptual grounding. On the other hand, we will use this account of conceptual grounding to explain the asymmetry property which is, at least according to an orthodox view, enjoyed by the grounding relation.
