

Second Position in the *R̥gveda*

John J. Lowe

john.lowe@wolfson.ox.ac.uk

16th International LFG Conference, 17th July 2011

1 The *R̥gveda*

The earliest surviving text in Sanskrit, the oldest surviving Indo-Aryan language. Collection of c. 1000 ‘hymns’, metrical texts with ritual function, composed 1500–1200 B.C. *R̥gvedic* syntax: free word order, based on Information Structure (Viti, 2010); discontinuous constituents.

1.1 Second Position

Wackernagel’s Law (Wackernagel, 1892): unaccented elements occur in second position in the clause. This is an over-simplification. Ex. (1) fits the pattern, but exx. (2, 3) do not.

(1) *mó* *sú* *nah* *soma* *mṛtyáve* *párā* *dāḥ*
not=and indeed us soma.v death.D.S away give
‘And do not hand us over to death, Soma.’ (10.59.4a)

(2) *utá* *vā* *yó* *no* *marcáyād* *ánāgasah*
also or who us would_harm innocent
‘or also who would harm us innocent’. (2.23.7a)

(3) *divyá* *ápo* *abhí* *yád* *enam* *áyan*
divine waters to when him came
‘when the divine waters came upon him’ (7.103.2a)

Not all enclitics are unaccented, and not all unaccented words are enclitic. Several enclitics are written with accent, e.g. *hí*, *sú*, *nú*. Finite verbs in main clauses are unaccented but not syntactically enclitic.

1.2 The Initial String

Previous approaches to RV word order and the initial string: the ‘Phonological Template’ approach (e.g. Hock, 1982, 1989, 1996, 1997; Schäufele, 1996). A movement-based (GB) approach by Mark Hale (e.g. 1987, 1996, 2007). Hock’s ‘Phonological Template’ is based on the observation that descriptively the initial string of a RV clause appears to consist of a series of optional elements, a kind of template.

(4) (Conj/*Conj*) (XP) (XP) (Preverb) (Dem./Rel. Pronouns) (*Particles*) (*Pronouns*)

2.1 ‘Movement’

- (10) τό τε βαρβαρικὸν καὶ τὸ Ἑλληνικόν
 τό te barbarikòn kai tò Hellēnikón
 ART and barbarian and ART Greek
 ‘Both the barbarian and the Greek (force).’ (X.A. 1.2.1)

- (11) *frāh ina, ga-u-hva-sehvi*
 asked him PRVB=Q=anything=sees
 ‘He asked him whether he could see anything.’ (Mk. 8:23)

But we can rarely prove syntactic constituency in Ṛgvedic Sanskrit, due to the potential for discontinuity.

- (12) *imám ca no gavéṣaṇaṃ sātáye sīśadho gaṇám*
 this and our cow-seeking for_victory direct company
 ‘and direct this our cow-seeking company to victory’. (6.56.5ab)

Even so there is evidence that enclitics can interrupt constituents which are syntactically so ‘tight’ that they would otherwise be analysed as indivisible lexemes. PN *nārāsámśa-* (lit. ‘praise of men’) separated by conjunctions: *nārā ca sāmśam* (9.86.42d) and *nārā vā sāmśam* (10.64.3a).

3 Ṛgvedic Clitic Data

3.1 Enclitic Conjunctions

According to Bögel et al. (2010, p.121, on Russian *li*) second position clitic conjunctions such as *ca* in Sanskrit are generated in a CCL, but one which has only the Prosodic Second Position rule, not the Syntactic Second Position option.

- (13) *ávobhir vā mahádbhiḥ sá prá śṛṇve*
 assistance.I.PL or great.I.PL this PRVB is_famed
 ‘or through your great assistances this one is famed’ (4.41.2d)

- (14) C-Structure for RV 4.41.2d (ex. 13) flg. Bögel et al. (2010)

However this is effectively the same position as for a ‘normal’, non-enclitic conjunction.

- (16) *agnír ugró véndrah* ‘Agni or fierce Indra’

An exception (cf. Hale, 2007, p.205–207):

- (17) *sahásradhāro asadan ny àsme mātúr upásthe vána á ca sómah*
 thousand-flow sat down us.L mother.G.S lap.L.S wood.L.S in and Soma
 ‘Thousand-flowing Soma sat down in us, in the lap of the mother and in the wood.’ (9.89.1cd)

3.2 Clitics in the CCL

In some contexts a CCL *is* justified. This is most clear, as in SCB, where more than one clitic of different lexical categories appear together in a particular position in the clause which cannot be justified on the basis of their lexical categorization.

- (18) *vidmá hí tvā vásupatim vásūnām*
 know.1PL for you wealth_lord wealth.G.PL
 ‘For we know that you are the lord of all wealth.’ (3.36.9b)
- (19) *vísvā sú no vithurá pibdaná vaso ’mitrán suśáhān kṛdhi*
 all indeed us.D unstable firm good.V enemies easy_to_conquer make.IMP
 ‘Indeed, make everything which is unstable firm for us, (and make) our enemies easy to conquer.’ (6.46.6cd)
- (20) C-Structure for ex. (19)

Sometimes a clitic pronoun or sentence particle (but not conjunction) appears after the first *constituent*; as in SCB the CCL can be generated in second *syntactic* position, and the clitics do not ‘move’.

- (21) *mahé kṣatrāya śávase hí jajñé*
 great.D.S dominion.D.S might.D.S for born.PERF.3SG
 ‘For he is born to great dominion (and) might.’ (7.28.3c)

3.3 Clitics later than second position

- (22) *divyá ápo abhí yád enam áyan*
 divine waters to when him came
 ‘when the divine waters came upon him’ (7.103.2a)

3.3.1 Left-dislocated topics

- (23) *brahmá kó vah saparyati*
 priest.N.S. who you(pl) honour..3SG
 ‘which priest honours you?’ (8.7.20c)

- (24) C-Structure for RV 8.7.20c (ex. 23)

3.3.2 Relative/Demonstrative Pronouns

Sandhi (*saṁdhi*): external vs. internal.

- (25) *nákiḥ só asty áraṇo, jahúr hí tám*
 no-one this is enemy leave.PF.3PL for him
 ‘This one is no enemy, for they left him’ (2.24.7d)

- (26) *nís táj jabhāra camasām ná vṛkṣād bṛhaspátir viravéṇā vikṛtya*
 out that bring.PF.3SG ladle like wood.AB.S Bṛhaspati roar.I.S having_opened
 ‘Bṛhaspati brought that out like a ladle from wood, having opened (the mountain) with a roar.’
 (10.68.8cd)

Evidence for relative pronouns as enclitics from other Indo-European languages: identical position in Old Irish (Watkins, 1963, p.29); the definite adjective declension in Balto-Slavonic; ezafe in Iranian languages; clitic positioning of relatives in Ancient Greek (Fraser, 2001, p.141).

3.3.3 Preverbs

Directional adverbs - in initial string (often first) or preceding verb. Former = topicalized (40–60%)? Or topicalizing verb? There are c. 200 clauses with *yám* (a.s.m. rel. pron.) where the verb has no preverb - the verb precedes in 3.5% of them; there are c. 70 clauses with a preverb, the preverb precedes in 28.3% of them.

- (27) *prá yó vām mitrāvaruṇā- ajiró dūtó ádravat*
 forth who you.DU M-V swift messenger runs
 ‘which swift messenger runs forth to you two, Mitra-Varuṇa’ (8.101.3ab)

- (28) *índro vidvāṁś ánu hí tvā cacákṣa*
 Indra wise PRVB for you look
 ‘For wise Indra looks at you’ (5.2.8c)

In the following example, we appear to have two distinct topicalized phrases *preceding* the preverb, which itself is followed by the CCL.

- (29) *agnír máhyam prá íd u vocan manīṣām*
 Agni me.D.S. PRVB PTCL also spoke intent
 ‘Agni has also revealed to me his intention’ (4.5.3d)

Preverbs are clearly not enclitic, but are often *proclitics*. If we assume that the CLL could host not just enclitics, but also proclitics, then both the position of the preverbs and the late position of the ‘second-position’ clitics can be easily explained.

- (30) C-Structure for RV 7.103.2a (ex. 3=22)

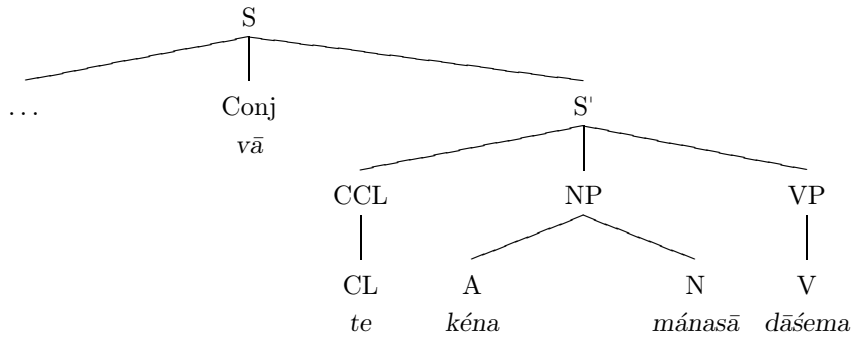

As proclitics, there is no restriction against preverbs occurring in clause-initial position (cf. ex. 27): therefore it is possible for the elements of a CCL to remain in first position in a clause if the first element of the CCL is a proclitic.

3.4 Combinations

The following shows both an enclitic conjunction, generated in Conj, and an enclitic pronoun, generated in the CCL, which both undergo phonological movement to within the first constituent of the clause.

- (31) *kéna vā te mánasā dāśema*
 what.I.S.N. or you attitude.I.S. worship.PRS.OPT.1PL
 ‘or with what attitude should we worship you?’ (1.76.1d)

- (32) C-Structure for RV 1.76.1d (ex. 31)

3.5 Summary of RV clitics

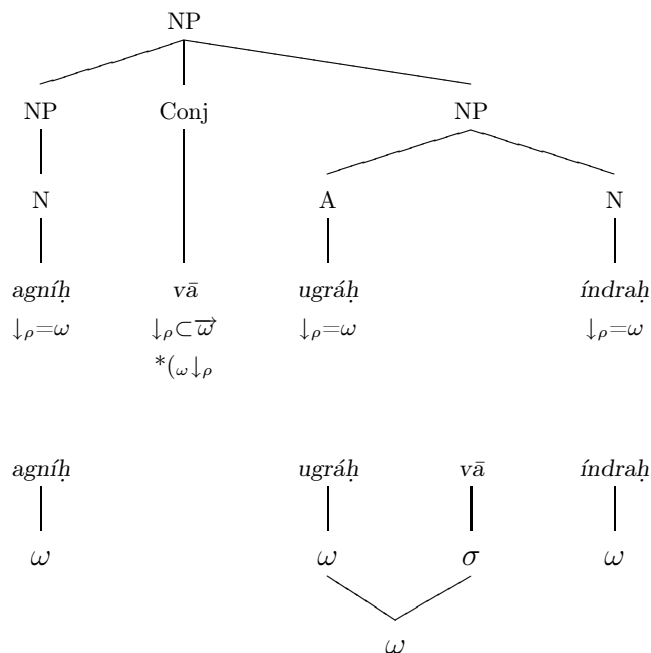

- Not all clitics are generated in the CCL
- Clitic conjunctions *always* ‘move’, CCL clitics only when necessary.
- Preverbs and non-initial demonstrative/relative pronouns can appear within the CCL.
- A proclitic at start of a CCL removes need for ‘movement’.
- ‘Movement’ may occur despite discontinuity of constituents.

4 An OT analysis of ‘movement’

(33) Correspondence relations in the projection architecture (fragment)

(34) *agnírugróvéndrah* (ex. 16)

agníḥ ugráḥ vā índrah				F-AL	P-AL	ω -AL	ECONOMY	S-ORD.
\mathbb{P} a.	[NP [NP [N a.]]	[CNJ vā]	[NP [A u.] [N í.]]]				6	*
b.	[NP [NP [N a.]	[A u.]	[CNJ vā]	[NP [N í.]]]		*!	6	

Constraints:

- F-AL: the c-structure is coherent with a possible/given f-structure.
- P-AL: the c-structure is coherent with a possible/given p-structure.
- ω -AL: preserve the order and integrity of phonological words.
- S-ORD.: preserve the order of lexical items as given in the p-string.
- ECONOMY: Economical structure is preferred (every XP and X^0 is penalized).

The constraint system is set up to require coherence between the c-structure and f- and p-structure, but not requiring preservation of the order of lexical items (the string) *only* in the case of clitics and only where necessary to produce valid structures.

(35) *kénavātemānasādāśema* (ex. 31)
